Planar

Not planar

- **Signature** (tensor)  $F : [q]^n \rightarrow \mathbb{C}$ 
  - **Domain**  $[q] := \{0, 1, \dots, q - 1\}$
  - **Arity**  $n \geq 1$

- **Signature** (tensor)  $F : [q]^n \rightarrow \mathbb{C}$ 
  - **Domain**  $[q] := \{0, 1, \dots, q - 1\}$
  - **Arity**  $n \geq 1$
- e.g.  $q = 2$ ,  $n = 5$ :  $F(x_1, x_2, x_3, x_4, x_5)$  for **Boolean** variables.

- **Signature** (tensor)  $F : [q]^n \rightarrow \mathbb{C}$ 
  - **Domain**  $[q] := \{0, 1, \dots, q - 1\}$
  - **Arity**  $n \geq 1$
- e.g.  $q = 2, n = 5$ :  $F(x_1, x_2, x_3, x_4, x_5)$  for **Boolean** variables.

- Ex:  $q = 2, \text{EO}_n : \{0, 1\}^n \rightarrow \{0, 1\}$  – **ExactOne** signature.

- **Signature** (tensor)  $F : [q]^n \rightarrow \mathbb{C}$ 
  - **Domain**  $[q] := \{0, 1, \dots, q - 1\}$
  - **Arity**  $n \geq 1$
- e.g.  $q = 2$ ,  $n = 5$ :  $F(x_1, x_2, x_3, x_4, x_5)$  for **Boolean** variables.

- Ex:  $q = 2$ ,  $EO_n : \{0, 1\}^n \rightarrow \{0, 1\}$  – **ExactOne** signature.
  - $EO_n(x_1, \dots, x_n) = 1$  iff exactly one  $x_i = 1$ .

- **Signature** (tensor)  $F : [q]^n \rightarrow \mathbb{C}$ 
  - **Domain**  $[q] := \{0, 1, \dots, q-1\}$
  - **Arity**  $n \geq 1$
- e.g.  $q = 2$ ,  $n = 5$ :  $F(x_1, x_2, x_3, x_4, x_5)$  for **Boolean** variables.

Diagram illustrating the evaluation of the signature  $EO_5$  for the input  $(0, 0, 1, 1, 0)$ . The inputs are listed vertically on the left: 0, 0, 1, 1, 0. Lines connect each input to a central black square node labeled  $EO_5$ . To the right of the node, the equation is written:  $EO_5 = EO_5(0, 0, 1, 1, 0) = 0$ .

- Ex:  $q = 2$ ,  $EO_n : \{0, 1\}^n \rightarrow \{0, 1\}$  – **ExactOne** signature.
  - $EO_n(x_1, \dots, x_n) = 1$  iff exactly one  $x_i = 1$ .

- **Signature** (tensor)  $F : [q]^n \rightarrow \mathbb{C}$ 
  - **Domain**  $[q] := \{0, 1, \dots, q-1\}$
  - **Arity**  $n \geq 1$
- e.g.  $q = 2$ ,  $n = 5$ :  $F(x_1, x_2, x_3, x_4, x_5)$  for **Boolean** variables.

Diagram illustrating the evaluation of the signature  $EO_5$  for the input  $(0, 0, 1, 0, 0)$ . Five inputs (0, 0, 1, 0, 0) are shown on the left, connected by lines to a central black square node labeled  $EO_5$ . The equation reads  $EO_5 = EO_5(0, 0, 1, 0, 0) = 1$ .

- Ex:  $q = 2$ ,  $EO_n : \{0, 1\}^n \rightarrow \{0, 1\}$  – **ExactOne** signature.
  - $EO_n(x_1, \dots, x_n) = 1$  iff exactly one  $x_i = 1$ .

- Let  $\mathcal{F}$  be a set of signatures (all on same domain).

- Let  $\mathcal{F}$  be a set of signatures (all on same domain).
- $\mathcal{F}$ -**grid** (**tensor network**)  $\Omega$  is a graph with a signature from  $\mathcal{F}$  on each vertex.

- Let  $\mathcal{F}$  be a set of signatures (all on same domain).
- $\mathcal{F}$ -**grid** (**tensor network**)  $\Omega$  is a graph with a signature from  $\mathcal{F}$  on each vertex.
  - **Arity** of signature equals degree of vertex.
  - Order incident edges counterclockwise starting from diamond.

## Example: Counting Perfect Matchings

- Goal: compute the **Holant value** (contraction) of  $\Omega$ :

$$\text{Holant}_{\Omega}(\mathcal{F}) = \sum_{\sigma: E(\Omega) \rightarrow [q]} \prod_{v \in V(\Omega)} F_v(\sigma(\text{edges incident to } v)).$$

## Example: Counting Perfect Matchings

- Goal: compute the **Holant value** (contraction) of  $\Omega$ :

$$\text{Holant}_{\Omega}(\mathcal{F}) = \sum_{\sigma: E(\Omega) \rightarrow [q]} \prod_{v \in V(\Omega)} F_v(\sigma(\text{edges incident to } v)).$$

## Example: Counting Perfect Matchings

- Goal: compute the **Holant value** (contraction) of  $\Omega$ :

$$\text{Holant}_{\Omega}(\mathcal{F}) = \sum_{\sigma: E(\Omega) \rightarrow [q]} \prod_{v \in V(\Omega)} F_v(\sigma(\text{edges incident to } v)).$$

$$\text{Holant}_{\Omega}(\text{EO}) = \text{EO}_2(\mathbf{1}, 0) \cdot \text{EO}_2(\mathbf{1}, \mathbf{1}) \cdot \text{EO}_3(0, \mathbf{1}, \mathbf{1}) \cdot \text{EO}_1(\mathbf{1}) +$$

## Example: Counting Perfect Matchings

- Goal: compute the **Holant value** (contraction) of  $\Omega$ :

$$\text{Holant}_{\Omega}(\mathcal{F}) = \sum_{\sigma: E(\Omega) \rightarrow [q]} \prod_{v \in V(\Omega)} F_v(\sigma(\text{edges incident to } v)).$$

$$\text{Holant}_{\Omega}(\text{EO}) = \text{EO}_2(\mathbf{1}, 0) \cdot \text{EO}_2(\mathbf{1}, \mathbf{1}) \cdot \text{EO}_3(0, \mathbf{1}, \mathbf{1}) \cdot \text{EO}_1(\mathbf{1}) +$$

$$= 1 \cdot 0 \cdot 0 \cdot 1 +$$

## Example: Counting Perfect Matchings

- Goal: compute the **Holant value** (contraction) of  $\Omega$ :

$$\text{Holant}_{\Omega}(\mathcal{F}) = \sum_{\sigma: E(\Omega) \rightarrow [q]} \prod_{v \in V(\Omega)} F_v(\sigma(\text{edges incident to } v)).$$

$$\begin{aligned} \text{Holant}_{\Omega}(\text{EO}) &= \text{EO}_2(\mathbf{1}, 0) \cdot \text{EO}_2(\mathbf{1}, \mathbf{1}) \cdot \text{EO}_3(0, \mathbf{1}, \mathbf{1}) \cdot \text{EO}_1(\mathbf{1}) + \\ &\quad \text{EO}_2(\mathbf{1}, 0) \cdot \text{EO}_2(\mathbf{1}, \mathbf{0}) \cdot \text{EO}_3(0, \mathbf{0}, \mathbf{1}) \cdot \text{EO}_1(\mathbf{1}) + \\ &\quad \dots \\ &= 1 \cdot 0 \cdot 0 \cdot 1 + \end{aligned}$$

## Example: Counting Perfect Matchings

- Goal: compute the **Holant value** (contraction) of  $\Omega$ :

$$\text{Holant}_{\Omega}(\mathcal{F}) = \sum_{\sigma: E(\Omega) \rightarrow [q]} \prod_{v \in V(\Omega)} F_v(\sigma(\text{edges incident to } v)).$$

$$\begin{aligned} \text{Holant}_{\Omega}(\text{EO}) &= \text{EO}_2(\mathbf{1}, 0) \cdot \text{EO}_2(\mathbf{1}, \mathbf{1}) \cdot \text{EO}_3(0, \mathbf{1}, \mathbf{1}) \cdot \text{EO}_1(\mathbf{1}) + \\ &\quad \text{EO}_2(\mathbf{1}, 0) \cdot \text{EO}_2(\mathbf{1}, \mathbf{0}) \cdot \text{EO}_3(0, \mathbf{0}, \mathbf{1}) \cdot \text{EO}_1(\mathbf{1}) + \\ &\quad \dots \\ &= 1 \cdot 0 \cdot 0 \cdot 1 + \\ &\quad 1 \cdot 1 \cdot 1 \cdot 1 + \\ &\quad \dots \end{aligned}$$

- Very expressive framework for counting problems.

## Why Study Holant?

- Very expressive framework for counting problems.
- But restrictive enough to admit **complexity dichotomy theorems**:

## Why Study Holant?

- Very expressive framework for counting problems.
- But restrictive enough to admit **complexity dichotomy theorems**:
- For **any** signature set  $\mathcal{F}$ ,  $\text{Holant}(\mathcal{F})$  is always **either** in P **or**  $\#P$ -hard, with **nothing** in between.

## Why Study Holant?

- Very expressive framework for counting problems.
- But restrictive enough to admit **complexity dichotomy theorems**:
- For **any** signature set  $\mathcal{F}$ ,  $\text{Holant}(\mathcal{F})$  is always **either** in P **or**  $\#P$ -hard, with **nothing** in between.

Broad dichotomies exist for  $\mathcal{F}$  containing signatures that are

- Domain  $q = 2$ ,  $\mathbb{C}$ -valued, symmetric [Cai-Guo-Williams'16]
- Domain  $q = 2$ ,  $\mathbb{R}$ -valued [Shao-Cai'20]
- Domain  $q = 3$ ,  $\mathbb{R}$ -valued, symmetric Holant\* [Cai-Ihm'25].

# Gadget Operations

# Gadget Operations

- $M(K \otimes L) = M(K) \otimes M(L)$

# Gadget Operations

# Gadget Operations

- $M(K \circ L) = M(K) \circ M(L)$

# Gadget Operations

- $M(\mathbf{K}^T) = M(\mathbf{K})^T$

## Graph Homomorphisms

A mapping  $\phi : V(K) \rightarrow V(G)$  is a **graph homomorphism** if it maps all edges to edges:  $\{u, v\} \in E(K) \implies \{\phi(u), \phi(v)\} \in E(G)$ .

# Graph Homomorphisms

A mapping  $\phi : V(K) \rightarrow V(G)$  is a **graph homomorphism** if it maps all edges to edges:  $\{u, v\} \in E(K) \implies \{\phi(u), \phi(v)\} \in E(G)$ .

- Graphs  $X$  and  $Y$  are **homomorphism-indistinguishable** over  $\mathcal{G}$  if  $\#\text{hom}(K, X) = \#\text{hom}(K, Y)$  for every  $K \in \mathcal{G}$ .

## Homomorphism Indistinguishability

- Graphs  $X$  and  $Y$  are **homomorphism-indistinguishable** over  $\mathcal{G}$  if  $\#\text{hom}(K, X) = \#\text{hom}(K, Y)$  for every  $K \in \mathcal{G}$ .

### Theorem ([Lovász'67])

$X$  and  $Y$  are homomorphism-indistinguishable over *all graphs* iff  $X$  and  $Y$  are isomorphic.

## Homomorphism Indistinguishability

- Graphs  $X$  and  $Y$  are **homomorphism-indistinguishable** over  $\mathcal{G}$  if  $\#\text{hom}(K, X) = \#\text{hom}(K, Y)$  for every  $K \in \mathcal{G}$ .

### Theorem ([Lovász'67])

$X$  and  $Y$  are homomorphism-indistinguishable over *all graphs* iff  $X$  and  $Y$  are isomorphic.

- Get relaxations of isomorphism for other  $\mathcal{G}$ :

## Homomorphism Indistinguishability

- Graphs  $X$  and  $Y$  are **homomorphism-indistinguishable** over  $\mathcal{G}$  if  $\#\text{hom}(K, X) = \#\text{hom}(K, Y)$  for every  $K \in \mathcal{G}$ .

### Theorem ([Lovász'67])

$X$  and  $Y$  are homomorphism-indistinguishable over *all graphs* iff  $X$  and  $Y$  are isomorphic.

- Get relaxations of isomorphism for other  $\mathcal{G}$ :
  - Known for **planar, bipartite, cycles, bounded tree/pathwidth**, etc.

## Homomorphism Indistinguishability

- Graphs  $X$  and  $Y$  are **homomorphism-indistinguishable** over  $\mathcal{G}$  if  $\#\text{hom}(K, X) = \#\text{hom}(K, Y)$  for every  $K \in \mathcal{G}$ .

### Theorem ([Lovász'67])

$X$  and  $Y$  are homomorphism-indistinguishable over *all graphs* iff  $X$  and  $Y$  are isomorphic.

- Get relaxations of isomorphism for other  $\mathcal{G}$ :
  - Known for **planar, bipartite, cycles, bounded tree/pathwidth**, etc.
  - Was open for **graphs of degree  $\leq d$**

## Homomorphism Indistinguishability

- Graphs  $X$  and  $Y$  are **homomorphism-indistinguishable** over  $\mathcal{G}$  if  $\#\text{hom}(K, X) = \#\text{hom}(K, Y)$  for every  $K \in \mathcal{G}$ .

### Theorem ([Lovász'67])

$X$  and  $Y$  are homomorphism-indistinguishable over *all graphs* iff  $X$  and  $Y$  are isomorphic.

- Get relaxations of isomorphism for other  $\mathcal{G}$ :
  - Known for **planar, bipartite, cycles, bounded tree/pathwidth**, etc.
  - Was open for **graphs of degree  $\leq d$**

### Theorem ([Mančinska-Roberson'20])

$X$  and  $Y$  are homomorphism-indistinguishable over **planar** graphs iff  $X$  and  $Y$  are quantum isomorphic.

## Homomorphism Indistinguishability

- Graphs  $X$  and  $Y$  are **homomorphism-indistinguishable** over  $\mathcal{G}$  if  $\#\text{hom}(K, X) = \#\text{hom}(K, Y)$  for every  $K \in \mathcal{G}$ .

### Theorem ([Lovász'67])

$X$  and  $Y$  are homomorphism-indistinguishable over *all graphs* iff  $X$  and  $Y$  are isomorphic.

- Get relaxations of isomorphism for other  $\mathcal{G}$ :

Recall:

### Lemma (consequence of Tannaka-Krein duality)

$M(\mathbf{K})_x = M(\mathbf{K})_y$  for every PI-#CSP( $\mathcal{F} \oplus \mathcal{G}$ )-gadget  $\mathbf{K}$  with one dangling edge iff  $x$  and  $y$  are in the same orbit of  $\text{Qut}(\mathcal{F} \oplus \mathcal{G})$ .

- We need a ‘continuous’ (orbit-free) version.
- Apply a similar duality theorem [Schrijver’08].

### Definition

$\text{Stab}(\mathcal{F} \oplus \mathcal{G}) := \{\text{orthogonal } H \mid H(\mathcal{F} \oplus \mathcal{G}) = \mathcal{F} \oplus \mathcal{G}\}$ .

### Lemma (Nonconstructive Lemma)

If  $\mathcal{F}$  and  $\mathcal{G}$  are Holant-indistinguishable, then  $\text{Stab}(\mathcal{F} \oplus \mathcal{G})$  contains an  $H$  which is **not** block-diagonal

- i.e.  $H|_{\mathcal{G}, \mathcal{F}} \neq 0$  or  $H|_{\mathcal{F}, \mathcal{G}} \neq 0$ .

## The orthogonal converse: nonconstructive lemma

Recall:

### Lemma (consequence of Tannaka-Krein duality)

$M(\mathbf{K})_x = M(\mathbf{K})_y$  for every PI-#CSP( $\mathcal{F} \oplus \mathcal{G}$ )-gadget  $\mathbf{K}$  with one dangling edge iff  $x$  and  $y$  are in the same orbit of  $\text{Qut}(\mathcal{F} \oplus \mathcal{G})$ .

- We need a ‘continuous’ (orbit-free) version.
- Apply a similar duality theorem [Schrijver’08].

### Definition

$\text{Stab}(\mathcal{F} \oplus \mathcal{G}) := \{\text{orthogonal } H \mid H(\mathcal{F} \oplus \mathcal{G}) = \mathcal{F} \oplus \mathcal{G}\}$ .

### Lemma (Nonconstructive Lemma)

If  $\mathcal{F}$  and  $\mathcal{G}$  are Holant-indistinguishable, then  $\text{Stab}(\mathcal{F} \oplus \mathcal{G})$  contains an  $H$  which is **not** block-diagonal

- i.e.  $H|_{\mathcal{G}, \mathcal{F}} \neq 0$  or  $H|_{\mathcal{F}, \mathcal{G}} \neq 0$ .
- Apply SVD to  $H_{V(\mathcal{G}), V(\mathcal{F})}$  to obtain  $D$  for inductive lemma.

## From planar to bipartite

$\mathcal{F} | \mathcal{F}'$  and  $\mathcal{G} | \mathcal{G}'$  are Holant-indistinguishable iff  
 $\overline{\text{GL}_q(\mathcal{F} | \mathcal{F}')} \text{ and } \overline{\text{GL}_q(\mathcal{G} | \mathcal{G}')}$  intersect.

- Proof uses geometric invariant theory:

### Theorem (The Approximate Converse [Cai-Y.'26])

$\mathcal{F} | \mathcal{F}'$  and  $\mathcal{G} | \mathcal{G}'$  are Holant-indistinguishable iff  $\overline{\text{GL}_q(\mathcal{F} | \mathcal{F}')} and  $\overline{\text{GL}_q(\mathcal{G} | \mathcal{G}')} intersect.$$

- Proof uses geometric invariant theory:

### Theorem ([Mumford-Fogarty-Kirwan'94])

$\mathcal{F} | \mathcal{F}'$  and  $\mathcal{G} | \mathcal{G}'$  are indistinguishable by all  $\text{GL}_q$ -invariant polynomials iff  $\overline{\text{GL}_q(\mathcal{F} | \mathcal{F}')} and  $\overline{\text{GL}_q(\mathcal{G} | \mathcal{G}')} intersect.$$

## Theorem (The Approximate Converse [Cai-Y.'26])

$\mathcal{F} | \mathcal{F}'$  and  $\mathcal{G} | \mathcal{G}'$  are Holant-indistinguishable iff  $\overline{\text{GL}_q(\mathcal{F} | \mathcal{F}')} \text{ and } \overline{\text{GL}_q(\mathcal{G} | \mathcal{G}')}$  intersect.

- Proof uses geometric invariant theory:

## Theorem ([Mumford-Fogarty-Kirwan'94])

$\mathcal{F} | \mathcal{F}'$  and  $\mathcal{G} | \mathcal{G}'$  are indistinguishable by all  $\text{GL}_q$ -invariant polynomials iff  $\overline{\text{GL}_q(\mathcal{F} | \mathcal{F}')}$  and  $\overline{\text{GL}_q(\mathcal{G} | \mathcal{G}')}$  intersect.

- $\text{Holant}_\Omega$  capture all  $\text{GL}_q$ -invariant polynomials!

## The Conditional Converse: Quantum Nonvanishing

- A **quantum gadget** is a formal linear combination of gadgets.

# The Conditional Converse: Quantum Nonvanishing

- A **quantum gadget** is a formal linear combination of gadgets.

## Definition

$\mathcal{F} | \mathcal{F}'$  is **quantum-nonvanishing** if  $\forall$  quantum  $\mathcal{F} | \mathcal{F}'$ -gadget  $K \neq 0$ ,

...

## The Conditional Converse: Quantum Nonvanishing

### Definition

$\mathcal{F} | \mathcal{F}'$  is **quantum-nonvanishing** if  $\forall$  quantum  $\mathcal{F} | \mathcal{F}'$ -gadget  $\mathbf{K} \neq 0$ ,  
 $\exists \mathcal{F} | \mathcal{F}'$ -grid  $\Omega$  containing  $\mathbf{K}$  s.t.  $\text{Holant}(\Omega) \neq 0$ .

## The Conditional Converse: Quantum Nonvanishing

### Definition

$\mathcal{F} | \mathcal{F}'$  is **quantum-nonvanishing** if  $\forall$  quantum  $\mathcal{F} | \mathcal{F}'$ -gadget  $\mathbf{K} \neq 0$ ,  
 $\exists \mathcal{F} | \mathcal{F}'$ -grid  $\Omega$  containing  $\mathbf{K}$  s.t.  $\text{Holant}(\Omega) \neq 0$ .

### (non)Example

$\mathcal{F} | \mathcal{F}' = [1 \ i] | \begin{bmatrix} 1 \\ i \end{bmatrix}$  is quantum-**vanishing** because every  $\mathcal{F} | \mathcal{F}'$ -grid has value 0:

$$[1 \ i] \bullet \text{---} \bullet \begin{bmatrix} 1 \\ i \end{bmatrix} = 1 \cdot 1 + i \cdot i = 0$$

## The Conditional Converse: Quantum Nonvanishing

### Example

$\mathbb{R}$ -valued  $\mathcal{F} | \mathcal{F}'$  is quantum-nonvanishing if  $\subset \in \mathcal{F}$  and  $\supset \in \mathcal{F}'$ :

## The Conditional Converse: Quantum Nonvanishing

### Example

$\mathbb{R}$ -valued  $\mathcal{F} | \mathcal{F}'$  is quantum-nonvanishing if  $\subset \in \mathcal{F}$  and  $\supset \in \mathcal{F}'$ :

- So  $\mathbb{R}$ -valued Holant setting is quantum-nonvanishing.

## The Conditional Converse: Quantum Nonvanishing

### Example

$\mathbb{R}$ -valued  $\mathcal{F} | \mathcal{F}'$  is quantum-nonvanishing if  $\subset \in \mathcal{F}$  and  $\supset \in \mathcal{F}'$ :

- So  $\mathbb{R}$ -valued Holant setting is quantum-nonvanishing.

### Theorem (The Conditional Converse [Cai-Y.'26])

If  $\mathcal{F} | \mathcal{F}'$  and  $\mathcal{G} | \mathcal{G}'$  are Holant-indistinguishable & quantum-nonvanishing, then there is a  $T \in GL_q$  such that  $\mathcal{F} | \mathcal{F}' = T(\mathcal{G} | \mathcal{G}')$ .

# The Conditional Converse: Quantum Nonvanishing

## Example

$\mathbb{R}$ -valued  $\mathcal{F} | \mathcal{F}'$  is quantum-nonvanishing if  $\subset \in \mathcal{F}$  and  $\supset \in \mathcal{F}'$ :

- So  $\mathbb{R}$ -valued Holant setting is quantum-nonvanishing.

## Theorem (The Conditional Converse [Cai-Y.'26])

If  $\mathcal{F} | \mathcal{F}'$  and  $\mathcal{G} | \mathcal{G}'$  are Holant-indistinguishable & **quantum-nonvanishing**, then there is a  $T \in GL_q$  such that  $\mathcal{F} | \mathcal{F}' = T(\mathcal{G} | \mathcal{G}')$ .

- Proof uses another version of Tannaka-Krein duality [Derksen-Makam'23].

## Bounded-degree graph homomorphisms

- Recall:  $\#\text{hom}(\cdot, X) \equiv \text{Holant}(\{A_X\} \mid \mathcal{EQ})$ .

$K$

$\Omega$

## Bounded-degree graph homomorphisms

- Recall:  $\#\text{hom}(\cdot, X) \equiv \text{Holant}(\{A_X\} \mid \mathcal{EQ})$ .

$K$

$\Omega$

- $\mathcal{EQ}_{\leq d} \subset \mathcal{EQ}$  is equalities of arity  $\leq d$ .

## Bounded-degree graph homomorphisms

- Recall:  $\#\text{hom}(\cdot, X) \equiv \text{Holant}(\{A_X\} \mid \mathcal{EQ})$ .

$K$

$\Omega$

- $\mathcal{EQ}_{\leq d} \subset \mathcal{EQ}$  is equalities of arity  $\leq d$ .
- $\text{Holant}(\{A_X\} \mid \mathcal{EQ}_{\leq d})$ : homomorphisms from **graphs of degree  $\leq d$** .

## Bounded-degree graph homomorphisms

- Recall:  $\#\text{hom}(\cdot, X) \equiv \text{Holant}(\{A_X\} \mid \mathcal{EQ})$ .

- $\mathcal{EQ}_{\leq d} \subset \mathcal{EQ}$  is equalities of arity  $\leq d$ .
- $\text{Holant}(\{A_X\} \mid \mathcal{EQ}_{\leq d})$ : homomorphisms from **graphs of degree  $\leq d$** .

### Theorem (The Approximate Converse)

$\mathcal{F} \mid \mathcal{F}'$  and  $\mathcal{G} \mid \mathcal{G}'$  are Holant-indistinguishable iff  $\overline{\text{GL}_q(\mathcal{F} \mid \mathcal{F}')} \text{ and } \overline{\text{GL}_q(\mathcal{G} \mid \mathcal{G}')}$  intersect.

## Bounded-degree graph homomorphisms

- Recall:  $\#\text{hom}(\cdot, X) \equiv \text{Holant}(\{A_X\} \mid \mathcal{EQ})$ .

- $\mathcal{EQ}_{\leq d} \subset \mathcal{EQ}$  is equalities of arity  $\leq d$ .
- $\text{Holant}(\{A_X\} \mid \mathcal{EQ}_{\leq d})$ : homomorphisms from graphs of degree  $\leq d$ .

### Theorem (The Approximate Converse)

$\mathcal{F} \mid \mathcal{F}'$  and  $\mathcal{G} \mid \mathcal{G}'$  are Holant-indistinguishable iff  $\overline{\text{GL}_q(\mathcal{F} \mid \mathcal{F}')} \cap \overline{\text{GL}_q(\mathcal{G} \mid \mathcal{G}')} \neq \emptyset$ .

### Corollary ([Cai-Y.'26])

$X$  and  $Y$  are homomorphism-indistinguishable over graphs of degree  $\leq d$  iff  $\overline{\text{GL}_q(\{A_X\} \mid \mathcal{EQ}_{\leq d})} \cap \overline{\text{GL}_q(\{A_Y\} \mid \mathcal{EQ}_{\leq d})} \neq \emptyset$ . This is **decidable**.

Thank you!
